

Amendments to the Specification

As suggested by the Office Action, please withdraw the amendment to the specification made in the response dated November 30, 2007.

Also as suggested by the Office Action, please replace the paragraph at page 22, lines 12 through 15 with the following amended paragraph:

The preferred embodiment of the narrow band digital filters uses a time to frequency transformation 431, Fig. 4A. For example, a forward Fourier transform may be used to convert time data to multiple narrow band filter outputs, one of which outputs is the desired narrow band filtered signal output.
